ACRODIVE

Co2 Absorbent in Dive System

Acrolime is a porous granular Sodalime absorbent for removal of acidic contaminants like CO₂ in gas stream. This product made of calcium hydroxide and additives.

APPLICATION:

- 1- Purification of breathable gases in closed diving apparatus.
- 2- Purification of breathable gases in submarines.

ADVANTAGE:

- 1- Low density and large surface area.
- 2- High CO₂ absorbing capacity.
- 3- Color change after saturation (pink to white).
- 4- Good mechanical property against crushing.

PACKAGING:

- PE 5 Lt jerican
- PE 10 Lt jerican
